

# Caffeine: Consumer Consumption Habits and Safety Perceptions

**March 2022** 

### Methodology

One thousand interviews were conducted among adults ages 18+ from February 3 to February 8, 2022 and were weighted to ensure proportional results.

The Bayesian confidence level for 1,000 interviews is 3.5, which is roughly equivalent to a margin of error ±3.1 at the 95% confidence level.

#### Statistical Significance

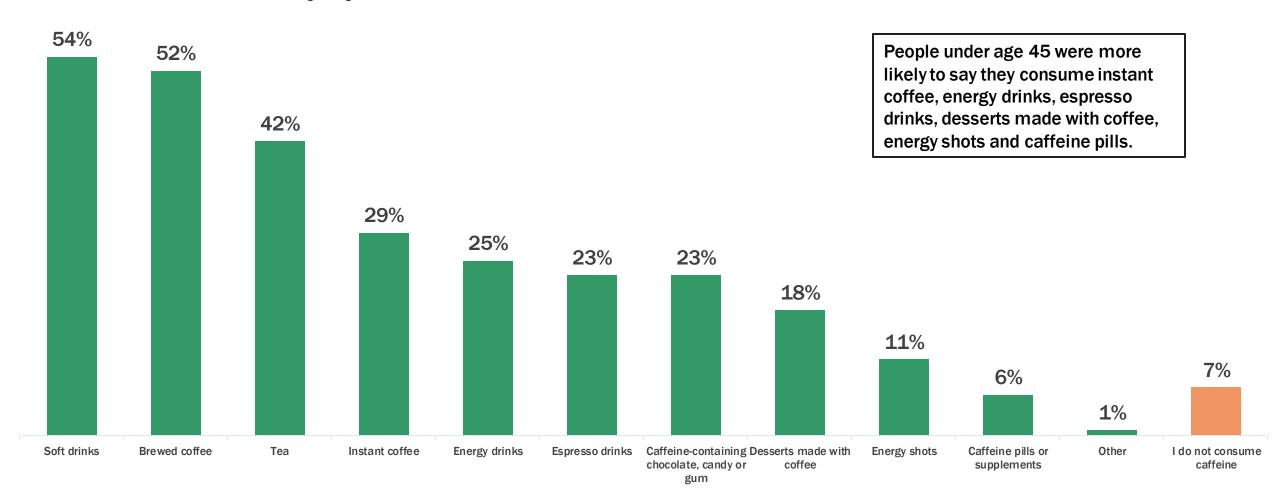

Something is statistically significant if the result cannot be attributed to random chance. Statistical significance in this presentation should be compared within each demographic (e.g. age, race, gender, etc.).

For example, if the responses from female respondents is considered to be significant, it is in relation to male respondents and not necessarily other demographic groups. 2

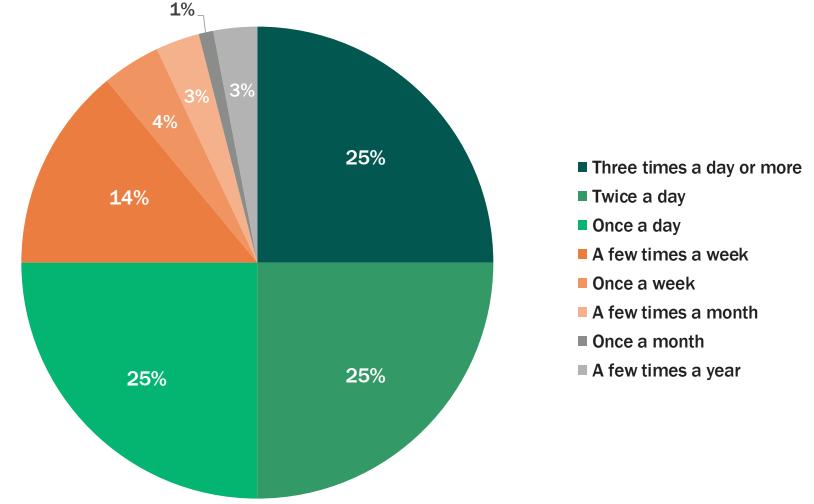

# Over 9 in 10 U.S. adults consume caffeine; soft drinks, brewed coffee and tea are the most popular sources

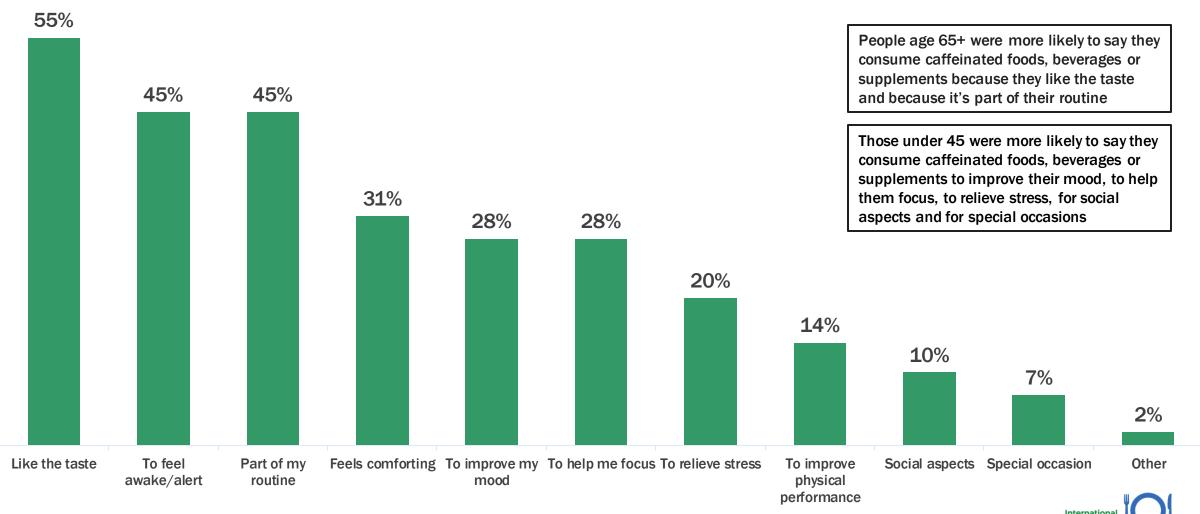

### Three in 4 caffeine consumers have it at least once a day; a quarter say they consume it three times a day or more

# The most common reasons for consuming caffeinated products are enjoying the taste, to feel awake/alert and because it's part of a routine

[If A-H in Q2] What are your reasons for consuming caffeinated foods, beverages or supplements? Select all that apply. n=928

### Reasons for consuming caffeine vary depending on product type

Those who consume soft drinks and tea were more likely to say that they consume caffeinated products because they like the taste, feels comforting and to improve their mood

Those who consume brewed coffee were more likely to say that they consume caffeinated products because they like the taste, to feel awake/alert and because it's part of their routine

Those who consume energy shots, energy drinks and caffeine pills were more likely to say that they consume caffeinated products to improve their mood, to help them focus, to relieve stress, to improve physical performance, for social aspects and for special occasion

Those who consume desserts made with coffee were more likely to say that they consume caffeinated products because it feels comforting, to relieve stress, to improve physical performance, for social aspects and for special occasion

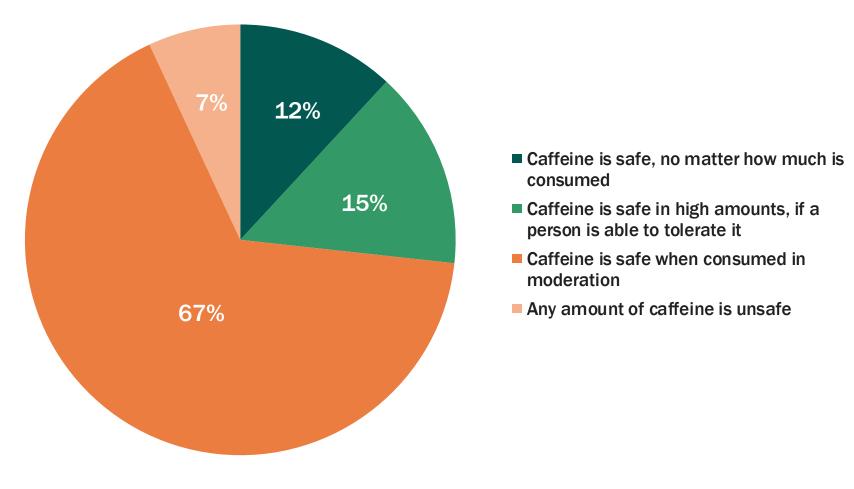

# Two in 3 believe that caffeine is safe when consumed in moderation; far fewer believe it's safe in high amounts

Those under 45 were more likely to say, "Caffeine is safe, no matter how much is consumed" and to say "Caffeine is safe in high amounts, if a person is able to tolerate it"

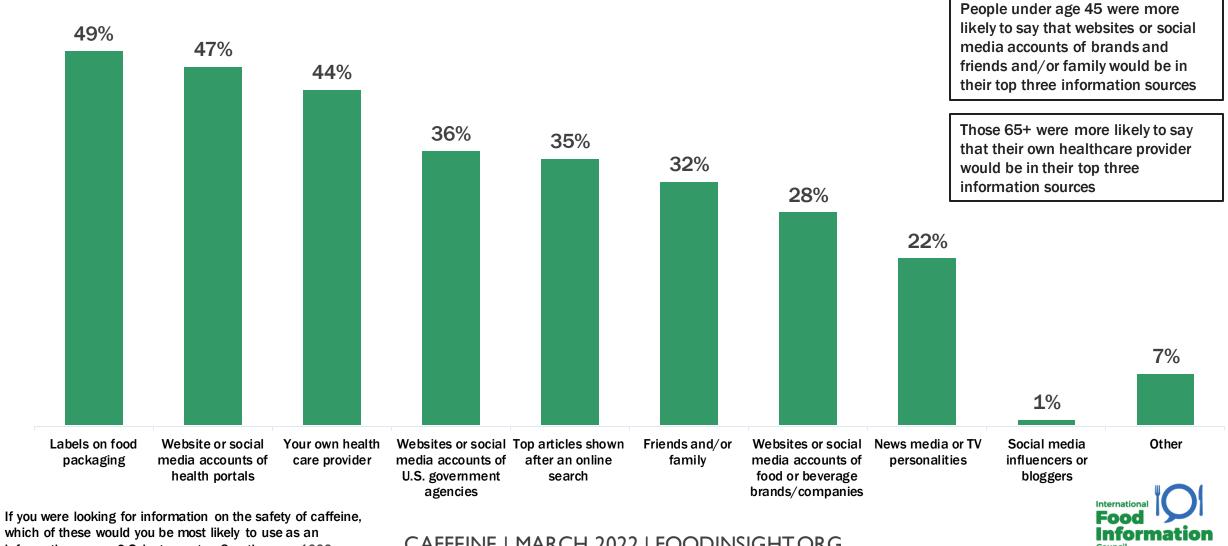

People age 65+ were more likely to say, "caffeine is safe when consumed in moderation"

Those without a college degree were more likely to say "any amount of caffeine is unsafe"

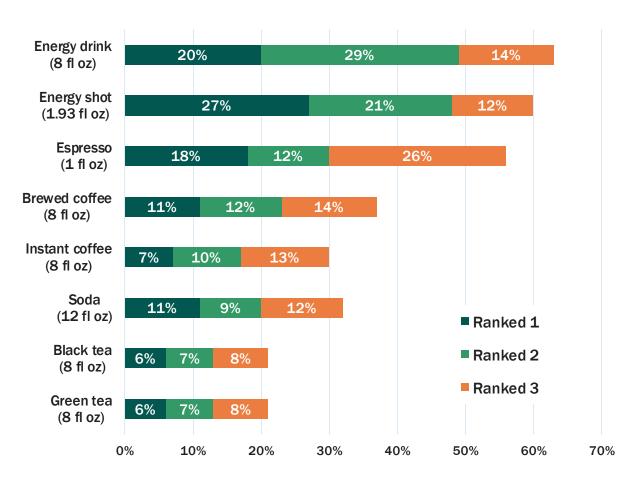

### On-package labels, health-focused websites/social media and health care providers are top sources of caffeine safety information

which of these would you be most likely to use as an information source? Select your top 3 options. n=1000

CAFFEINE | MARCH 2022 | FOODINSIGHT.ORG

### Energy drinks, energy shots and espresso are commonly perceived to be highest in caffeine

#### <u>Caffeine Content of Select Beverages:</u>

- 1. Energy Shot (1.93 fl oz): 200 210 mg
- 2. Brewed Coffee (8 fl oz): 96 mg
- 3. Energy Drink (8 fl oz): 72-77 mg
- 4. Espresso (1 fl oz): 63.6 mg
- 5. Instant Coffee (8 fl oz): 62.4 mg
- 6. Black Tea (8 oz): 48 mg
- 7. Soda (12 fl oz cola): 33.5 mg
- 8. Green Tea (8 fl oz): 28.8 mg

Source: USDA 2019 Food Data Central Database; see: Sources & Amounts - Everything Caffeine (foodinsight.org)

Please rank the following beverages based on the amount of caffeine you think they contain, with 1=the beverage with the highest amount of caffeine and 8=the beverage with the lowest amount of caffeine. n=943

### Most Americans underestimate or are not sure of how much caffeine is safe to consume

For healthy adults, the U.S. Food and Drug Administration has cited 400 milligrams a day as an amount not generally associated with dangerous, negative effects.

Source: FDA, 2018

Source: ACOG, 2020

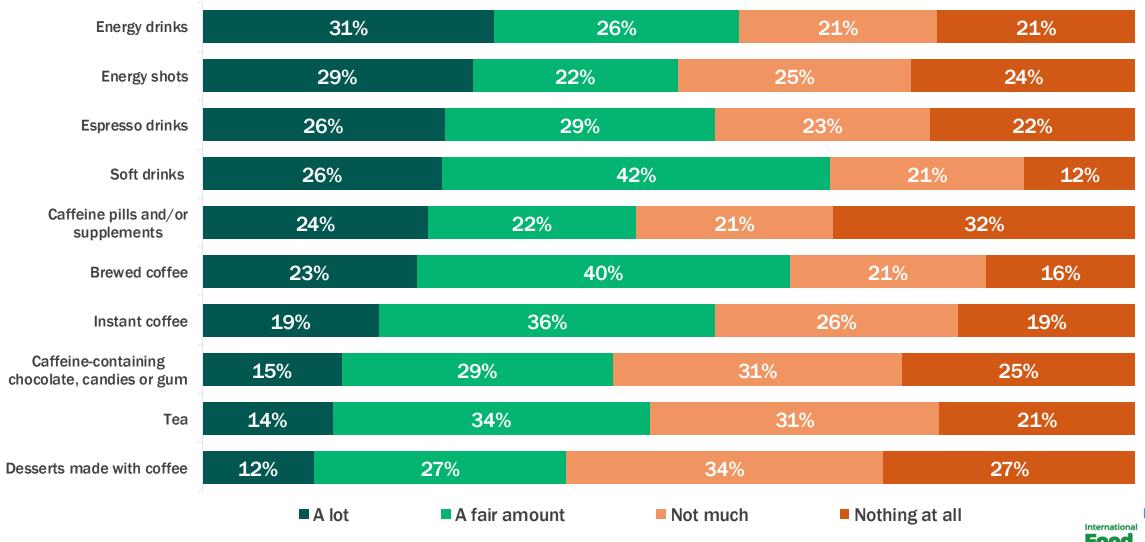

Which would you perceive to be a safe amount of caffeine for a healthy adult to consume on a daily basis? n=1000

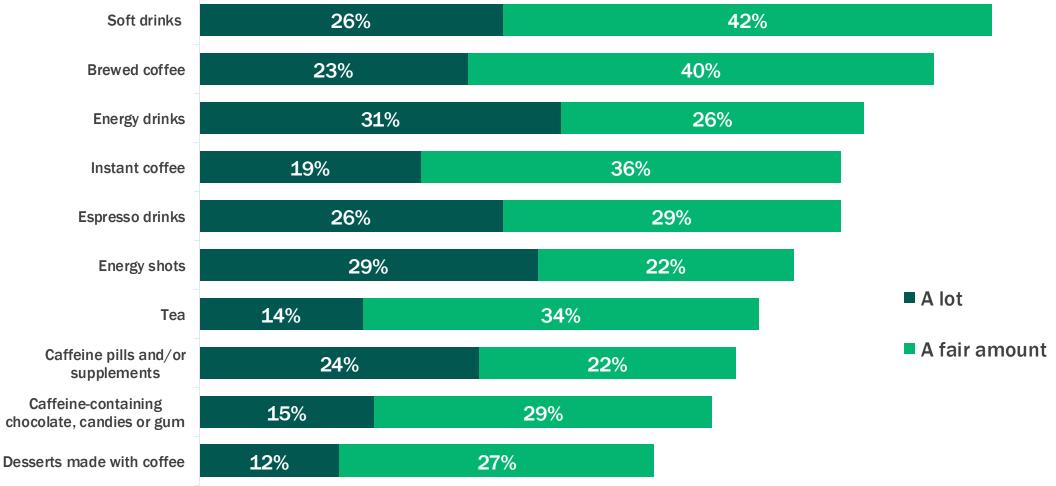

<sup>■</sup> Up to 200 mg/day (about 2 cups of brewed coffee or 1 liter of soda) ■ Up to 300 mg/day (about 3 cups of brewed coffee or 1.5 liters of soda) 29% 38% ■ Up to 400 mg/day (about 4 cups of brewed coffee or 2 liters of soda) Up to 500 mg/day (about 5 cups of brewed coffee or 2.5 liters of soda) 3% More than 500 mg/day (more than 5 cups of brewed coffee or 2.5 liters of 10% soda) 17% I don't know

<sup>\*</sup>The American College of Obstetricians & Gynecologists recommends that pregnant women limit their caffeine consumption to 200 mg per day.

### Americans most frequently report knowing about the caffeine content in soft drinks, coffee and energy drinks; less is known about caffeine in foods and supplements

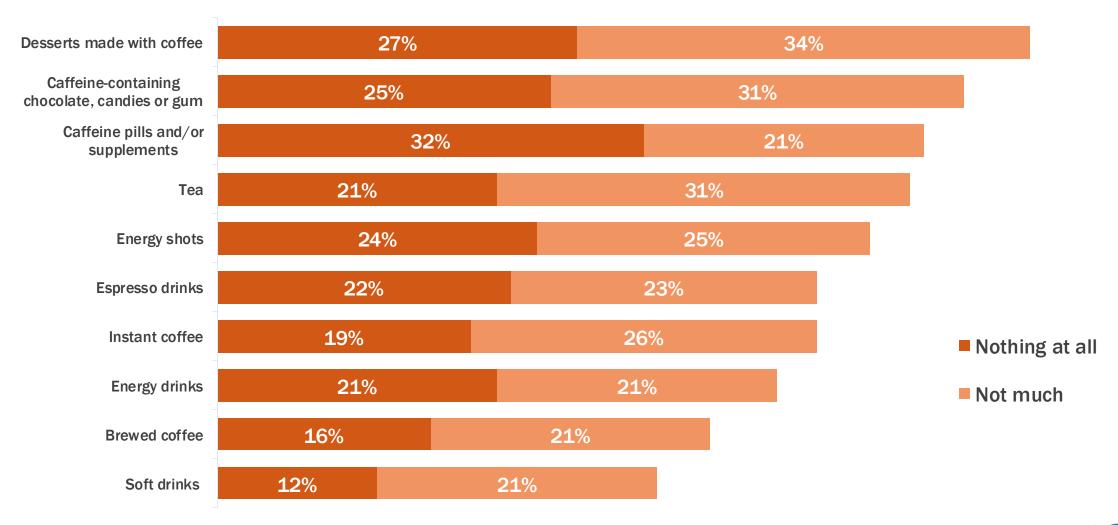

### Americans most frequently report knowing about the caffeine content in soft drinks, coffee and energy drinks

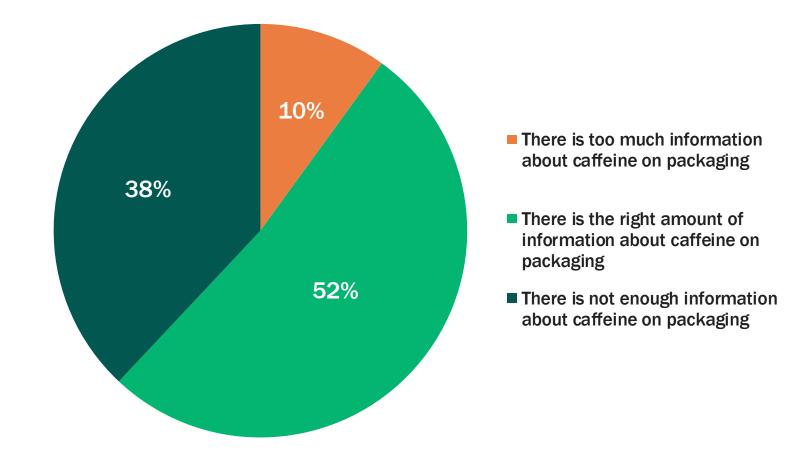

#### Less is known about the caffeine content of foods and supplements

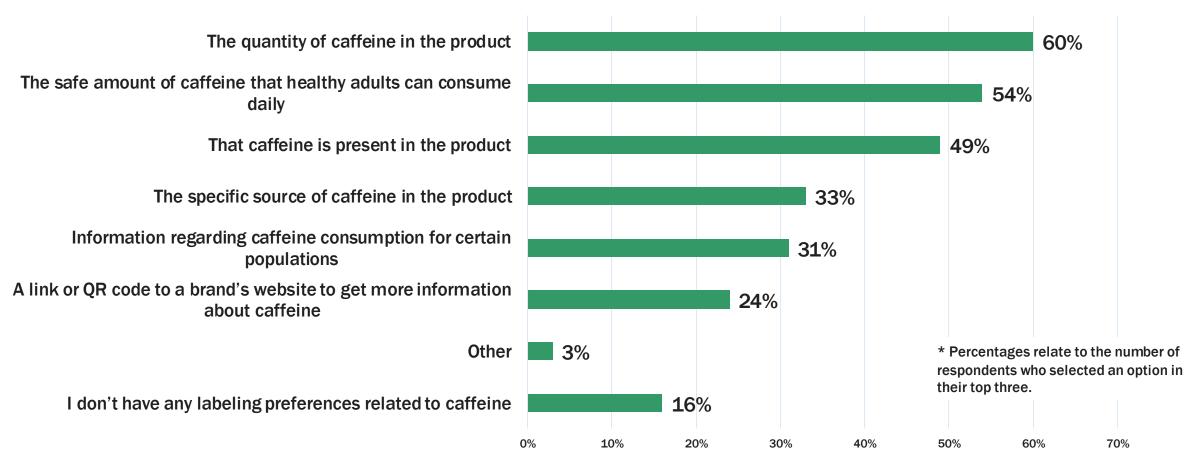

# Over half believe that there is the right amount of information about caffeine on packaging

# Information on quantity, safe amount and presence of caffeine are viewed as most important to see on food packaging

# Appendix

Q1. Which of the following sources of caffeine do you consume? Select all that apply. If you do not consume caffeine, select the last option in this list
